

Jungle Facts

Over half the world's types of plants and animals
live in the jungle!

The jungle is very warm and very wet!

Jungles are overgrown with
lots of tangled vegetation and
dense forest!

Thousands of insects live in one
jungle tree!

The trees are very tall in the rainforest, so the ground underneath them doesn't get very much sunlight. Not many plants grow on the floor without sunlight.

A photograph of a dense jungle. Sunlight filters through the thick canopy of green leaves and branches, creating a hazy, dappled light effect. The foreground shows some large green ferns. The background is filled with more trees and foliage, creating a sense of depth and mystery.

There are lots of plants and animals in the jungle that have never been discovered!

The jungle is very dark. Only 1% of the jungle has sunlight because of the shade from the trees!
